

CYCLISTIC — RIDER REPORT

Where the growth is, and who to convert.

An executive read on 12 months of ride data — July 2025 through June 2026.

Prepared for the executive team

5.93M rides analyzed

Members drive volume. Casual riders are a weekend, warm-weather, tourist-shaped growth opportunity.

36%

of rides came from casual riders

The other 64% came from members. Casual is a real, measurable third of the base.

+74%

longer average ride for casual riders

21.7 min vs 12.5 min. Casual behaviour looks leisurely; member behaviour looks purposeful.

~2x

casual rides start at tourist spots

Navy Pier, Millennium Park and lakefront stations dominate casual starts.
Member starts cluster around downtown commute corridors.

One in three rides today is from someone we haven't yet converted.

36%

of rides were from casual riders

2.12M rides over 12 months

CASUAL 36%

MEMBER 64%

2,116,622 casual rides

3,815,692 member rides

Members are the majority — but 36% is far too large a share to treat as background noise.

If even a fraction of casual rides become member rides, the shift shows up in the revenue line.

Summer is when the casual base swells. Members ride year-round.

Member volume clears 400K rides/month May through October. Casual volume clears 300K only in June, July and August — a tight, seasonal window.

Members ride Monday to Friday. Casual riders ride Saturday and Sunday.

Casual rides last roughly 75% longer — they're outings, not errands.

CASUAL

21.7

minutes on average

Median 11.2 min

MEMBER

12.5

minutes on average

Median 8.6 min

The pattern holds on both the average and the median, so it's not driven by a handful of long trips. It looks like different jobs to be done — A-to-B for members, a loop for casuals.

Both audiences pick electric bikes over classic — roughly two to one.

CASUAL

Casual riders take ~2.3× more electric than classic.

MEMBER

Members take ~2.0× more electric than classic.

Electric preference is universal, not casual-specific. Fleet mix, pricing and marketing should treat electric as the default product.

Casual demand concentrates at lakefront tourist spots.

These are destinations, not commutes — leisure demand, weekends and warm weather.

Member demand concentrates at downtown commute nodes.

Loop and near-north commuter corridors — the top member station attracts less than half the demand of Navy Pier.

Two customers using the same bikes for two different jobs.

THE MEMBER		THE CASUAL RIDER	
Weekday commuter		Weekend visitor	
Volume	64% of rides	Volume	36% of rides
Peak day	Tuesday - Thursday	Peak day	Saturday and Sunday
Ride	12.5 min average • short and purposeful	Ride	21.7 min average • leisurely, loop-shaped
Starts	Loop and near-north commute corridors	Starts	Navy Pier, lakefront, museums
Season	Rides year-round, peaks in summer	Season	Concentrated June - August

The conversion pitch to a Chicago commuter is a different pitch than the one to a summer visitor.

A three-pillar program to convert weekend visitors into year-round members.

01

Meet them at the destination

Partner with lakefront destinations — Navy Pier, Millennium Park, the Shedd — to offer member-only perks (discounts, priority queues, combo passes). Turn the reason they're already riding into a reason to sign up.

02

Own the summer weekend

Warm-weather, weekend-only promotions built around the moments when casual demand actually spikes: seasonal membership tiers, first-month-free from June, and neighbourhood 'day-out' route bundles.

03

Build a reason to come back

Curated group rides and social outings — a monthly member ride to a brewery, a sunset lakefront route, a partner event. Casual riders convert when membership offers something a punch-card can't: belonging.
